PROFILE SUMMARY

Platform Engineer with 5 years of experience building CI/CD pipelines, internal tools and platforms, and cloud infrastructure, with a passion for improving reliability, security, and delivery speed.

Strong background in cloud and on-premise environments, infrastructure as code, containerization, observability, and source control. Current role involves integrating AI into organizational processes and establishing governance for its use.

SKILLS

- **Cloud Platforms:** AWS, Azure
- **Containerization & Orchestration:** Docker, Kubernetes, Helm
- **Infrastructure as Code (IaC):** Terraform, Ansible
- **CI/CD & GitOps:** Azure DevOps, GitHub Actions, Jenkins, Git
- **Observability & Operations:** Datadog, PagerDuty, Azure Log Analytics
- **Scripting & Automation:** Bash, PowerShell, Python, JavaScript
- **Operating Systems:** Windows, Linux (Ubuntu, Fedora, CentOS)
- **Infrastructure & Virtualization:** VMware, Pure Storage

PROFESSIONAL EXPERIENCE

Barrett Business Services Inc

March 2026 – Present

Platform Engineer

- Integrated AI-assisted tooling into SDLC workflows to improve developer productivity and accelerate code delivery.
- Built an internal developer platform to streamline SDLC processes and reduce deployment friction.
- Partnered with engineering and security teams to establish governance patterns for responsible AI use aligned with security and compliance requirements.

Barrett Business Services Inc

August 2022 – March 2026

DevOps Engineer

- Created Terraform-based Infrastructure-as-Code (IaC) to provision and manage development and production environments across multiple regions, improving deployment consistency and reducing manual infrastructure setup.
- Built and maintained Kubernetes-based CI/CD pipelines using Helm charts to deploy and promote services across environments, improving release reliability and supporting audit and security requirements.
- Designed and implemented an internal systems API exposing operational and monitoring data, improving platform visibility and reducing outage troubleshooting time.
- Supported production services in a PagerDuty on-call rotation, responding to incidents and coordinating resolution across infrastructure and application teams.

Uplevel Systems

August 2021 - August 2022

DevOps Support Developer

- Refactored a legacy monitoring workflow, reducing runtime and enabling near real-time operational insights through automation.
- Implemented multi-factor authentication for a custom OpenVPN platform, coordinating backend and frontend changes, and delivering a dedicated client installer.
- Designed infrastructure for internal development environments, reducing cloud-hosting costs in a hybrid cloud/on-prem environment.
- Used Ansible to automate environment setup and configuration tasks across internal systems.
